

Java

```
class Solution {  
    public boolean parseBoolExpr(String expression) {  
  
    }  
}
```

JavaScript

```
/**  
 * @param {string} expression  
 * @return {boolean}  
 */  
var parseBoolExpr = function(expression) {  
  
};
```

TypeScript

```
function parseBoolExpr(expression: string): boolean {  
  
};
```

C++

```
class Solution {  
public:
```

```
    bool parseBoolExpr(string expression) {  
    }  
}
```

C#

```
public class Solution {  
    public bool ParseBoolExpr(string expression) {  
    }  
}
```

Kotlin

```
class Solution {  
    fun parseBoolExpr(expression: String): Boolean {  
    }  
}
```

Go

```
func parseBoolExpr(expression string) bool {  
}
```
